

App Coronavirus Alert

Tracking tourist and citizens infected with coronavirus

The person can be tracked, report symptoms and notify the country authorities if the virus is positively confirmed in their body.

Coronavirus Alert is an App that allows the citizen to send alarms for confirmation and portability of the virus.

Coronavirus Alert provides nationwide coverage to report symptoms and seek assistance from health authorities. Each reported emergency is accompanied by your satellite position so that help can find it quickly.

Reported emergencies can be accompanied by photographs, audio and videos captured by the citizen thus facilitating the understanding of the alert for more efficient care.

The government agency may make mass notifications with health regulations and policies that have relevance for the prevention of the disease to society.

The app allows you to geolocate and assist the infected person.

Centralized geofences inform the population of areas with the highest rate of affected areas that are not recommended to be transited.

The app allows the citizen to know the hospitals and health centers closest to their location.
